

Multi-Surface Graffiti Remover

A truly remarkable Graffiti remover, incorporating breakthrough technology to give effective removal on both porous & non-porous substrates as well as from many previously painted surfaces.

Product Features

-  One safer Graffiti Remover replaces a range of products.
-  Use inside and out on many different surfaces, including Anti-Graffiti coatings.
-  100% biodegradable formulation. Contains no chlorinated solvents.
-  Gelled for use on vertical surfaces. Easily washes off with water.
-  Fast acting with slow evaporation means it stays wet to work longer.

Suitable Substrates

Magic Bullet's 'Multi-Surface Graffiti Remover' (MSG) incorporates the latest technology to allow it to work on a multitude of uncoated surfaces - such as Brick, stone, concrete & render as well as hard surfaces such as those found in rail carriages, shop fronts and bus shelters. It will even remove graffiti from many types of painted surfaces.

TRIAL APPLICATION - Some Plastics and paints are not compatible with even the gentlest of cleaners, so it is essential to carry out a 'small discrete trial application' prior to any use on these materials to see if removal can be carried out successfully and without any long term damage to, or change in, surface appearance.

It is entirely the responsibility of the user to thus determine both the initial suitability and then the appropriate dwell times of our 'Multi-Surface Graffiti Remover' for their particular use.

Application

Works best in warmer conditions (10 - 30 °C). Use neat, do not dilute. Wear suitable gloves, clothing and eye protection.

On plastics or coated surfaces -Test for 'dwell' time (the amount of time the remover takes to work). Apply the product to a small area of graffiti. Using a clean cloth check a part of this area every few minutes. When the graffiti is loose and lifting clean off the surface this is your 'dwell time'. Wipe off completely and rinse well with clean water. Check to ensure no surface damage has occurred.

Apply MSG liberally over the area to be cleaned using a brush and allow to dwell for the pre-determined time before removal. For small areas remove with a clean cloth turning the cloth repeatedly to 'lift' the Graffiti away then rinse thoroughly. For larger areas wash down with clean water using an appropriate brush or sponge.

On Bare surfaces – Carry out a small discrete (unseen) trial to check no surface change will occur. Apply MSG liberally to dry surface using a brush. Note- porous substrates may require more product and longer times. Allow to work as needed (MSG does not evaporate quickly) Agitate with a stiff brush if needed. Check a small area and, when the graffiti is loose, wash down thoroughly. Best results are obtained using a pressure washer. Allow surface to dry and repeat if required. On the rare occasion there is a residual shadow, remove using Magic Bullet Products 'Graffiti Shadow Remover'. **Be aware that the solvents in some aerosol graffiti will already have damaged some substrates. This often shows as a permanent 'etch' or 'shadow' after removal and cannot be removed.**

Please refer to the relevant Product Health and Safety Data Sheet prior to any use.
